About me:

Product-focused Full-Stack Engineer with a frontend emphasis, I like combining strategic planning with top technical and aesthetic execution. Committed to UX/UI requirements, performance, accessibility, and passionate about writing clean, readable, tested, and scalable code.
Focused team player dedicated to owning, leading, and developing features from scratch while meeting deadlines and sprint goals. Enjoy collaborating closely with Product Managers and Designers to create rich features from discovery to delivery.

Experience:

Software Developer at Law and Innovation Technology, Alexander von Humboldt Institute for Internet and Society, Berlin, April 2024- Sept 2024

An academic spin-off and research project.
Developed a consent agent and cookie banner (initially integrated in a browser extension) that lets consumers manage their cookie consent across the web.
Conducted a quantitative A/B user test with 11 groups using different design combinations and to measure how this differences impact the users' consent rates .
Tech Stack: Monorepo Architecture with Turborepo, Typescript React and Tailwind to build main applications and components, Redux for state management and event-driven architecture, creation of NPM packages. Integration of components in Plasmo , the Browser Extension Framework, Crome APIS. NestJs for event distribution,
